Tour Participants: Tom & Greg Mabbett (leaders)
A group of 11 Naturetrek clients.

Summary:

The group spent a superb week exploring this wonderfully bird-rich region. Highlights included spectacular views of Spanish Imperial Eagle; Scops Owl performed very well; and a fantastic flock of Collared Pratincoles was another favourite. We enjoyed the variety of habitats and had great views of a whole host of special species. All this was coupled with superb hospitality and lots of fun along the way.

Day 1

Thursday 30th April

Most of the group met Tom and Greg at Heathrow airport before our flight to Spain. Once we had landed and with vehicles collected, we were soon on our way.

En route we stopped at a service station where we had a drink and our first taste of the Spanish birdlife. We managed to see a few birds flying over and on a small pool including Griffon and Cinereous (Black) Vultures, Black Kite, Red-rumped Swallow, Gadwall, Little Grebe, and the first of many Corn Buntings: a great start to the birding. With everyone refreshed we started the last leg of our journey and on the way spotted a few more birds flying over the road: Hoopoe, Booted Eagle and White Stork.

We arrived at Vina las Torres and were warmly welcomed by Juan Pedro and his family. We were also joined by Keith and Sue who had made their own way in their camper van, and this completed our group. We had a short time to settle in before enjoying our first delicious meal. After dinner everyone retired, looking forward to our first full day's birding.

Day 2

Friday 1st May

Following breakfast at 7.30am we headed to our first destination; some steppe land just outside Santa Marta Da Magasca. Before departing and whilst waiting for everyone by the vehicles, a Nightingale was singing nearby and we watched Red-rumped Swallow, Woodchat Shrike, Hoopoe and Serin.

As we pulled up for our first walk a Southern Grey Shrike was perched on a hedge, Black Kites were following the road, and our first target bird was found - a male Little Bustard displaying on a near rock. A great start! As we walked down the track Corn Buntings and Crested and Calandra Larks were singing everywhere and further on we had great views of the Little Bustard, still on his favourite rock. We spent some time on the walk back to the vehicles getting familiar with all the bird song around us.

Once back in the vehicles we had a short drive to view some more steppe land and a couple of pools. Here we had brief views of Great Bustard and Zitting Cisticola, whilst overhead were Booted Eagle and Griffon Vulture with a stunning male Montagu's Harrier. We also saw both sandgrouse species but these were flight views and rather distant. Around the pools Kerry spotted four Black-winged Stilts, whilst on the pool were Moorhen, Mallard and Little Grebe.

Refreshments were now in order so we went to the village of Santa Marta Des Magasca for a welcome break. As we enjoyed our refreshments we saw nesting Swallows, House Martins and a pair of Goldfinches. Next we went to the Monroy road where we were treated to stunning views of Montagu's Harrier: at least ten birds seen calling and interacting together. Also in the area were two Little Bustards, Sothern Grey Shrike and more Black and Griffon Vultures. We stopped a short way along the road to have our picnic lunch next to a river. We had great views of Crag Martins nesting on the nearby bridge, and a Golden Eagle gave a distant fly by.

With everyone replete we continued on, driving back through the village and to an area where there were nest boxes for Rollers. We saw a few Spanish Sparrows but the stars were a stunning pair of Rollers around the boxes giving very close views on the wires. A Pair of Hoopoe and both pale and dark phase Booted Eagles passed overhead. We also had superb close views of five male Great Bustards here. On the drive back we stopped at a river for a drink and saw Grey Wagtail, Kingfisher, Short-toed Eagle, a flock of Spanish Sparrows, and Little Ringed Plover on a rock in the middle of the river. Noisy Marsh Frogs and terrapins were also seen.

With everyone refreshed we moved on to try our luck at finding Great Spotted Cuckoo. En route we had a real surprise when an Egyptian Mongoose ran in front of the vehicle and alongside us for a while! After eventually finding our way through Madroners and seeing a few friendly locals, we found ourselves at an area with plenty of tamarisk, low scrub and Magpies - perfect for our target species. We had a short walk along the track seeing Zitting Cisticola, Corn Bunting, Crested Lark and Booted Eagle - but no cuckoos. Then, as we set off, two Great Spotted Cuckoos flew over. We quickly got out again and enjoyed distant views of these tricky birds with one perched on wires.

After another great evening meal we filled in our checklist with the day's sightings and then everyone headed for bed.

Day 3

Saturday 2nd May

We started the day with another delicious breakfast after which we set off for the day, heading south towards Zorita and then towards Madrigalego.

At our first stop we pulled in near a couple of stony ploughed fields for a short walk. As we got out of the vehicles there were Collard Pratincoles circling over the field. On closer inspection there were a number of pratincoles on the ground with others circling, calling and setting up territories in the field: everyone had great views! Also in the background we saw a pair of Stone Curlew. As we walked down the side of the field to get a better view of the birds a Melodious Warbler was singing from an exposed perch, and then a dark phase Booted Eagle flew overhead putting up all the pratincoles which gave us excellent flight views of 22 birds. We enjoyed watching the birds for a while before moving on. Driving back to the main road we saw a few Bee-eaters using a flock of sheep as a buffet, feeding on flying insects attracted to the sheep and being disturbed as the flock moved through the long grass. This was great behaviour to see and a really special start to the day!

After a short drive we were just outside Madrigalego and we turned onto a small road. Opposite a peach orchard were a few pools lined with reeds so we stopped here to see what was attracted by the water. We saw Little Ringed Plover, Gull-billed Tern, Marsh Harrier, Little Egret, Hoopoe and Spotless Starling; but the bird of the stop was a Great Reed Warbler. It was singing loudly from a nearby perch and gave great views for the group to

get to grips with its call and identification. There was also a flock of Red Avadavat here. As we were getting back into the vehicles two more Collared Pratincoles flew by, heading quickly over the pools. As the day was at its hottest point we headed to Madrigalego for a coffee stop.

We had coffee in a local cafe accompanied by swifts screaming overhead and White Storks on the church 'bill clapping'. We then continued, first finding our way out through the maze of streets. We stopped whilst passing the Sierra Brava reservoir where we saw Great Crested Grebe and Grey Heron. We then drove to the Alcollarin reservoir. We stopped at the picnic site next to the reservoir and everyone had a chance to see what was about while lunch was being prepared. It was an excellent site with Great White Egret, Spoonbill, Cattle Egret and Purple Heron all in the same tree; and a family of Egyptian Geese were also seen. After enjoying our picnic we continued to scour the reservoir and found Kingfisher, White Wagtail and Marsh Harrier. We then walked down towards the main reservoir to view a shallow corner in the shade. Here Spoonbill were feeding with their side to side motion, quickly swallowing anything they have caught, and Black-winged Stilt, Garganey, Gadwall, Greylag Goose and a pair of Bee-eaters showed well.

We then drove the full length of the reservoir spotting a Common Sandpiper and three Woodchat Shrikes. We also had excellent views of a Thekla Lark which was a new bird and a tricky one to identify. An enormous colony of Spanish Sparrows was at the very end of the reservoir as well as a large flock of Cattle Egrets. We slowly made our way back along the reservoir before having a second refreshment stop in Zorita as it was a hot day. We then returned to our hotel and had some free time before our delicious evening meal.

After the evening meal we set off towards the nearby town of Madronera with the hope of hearing and possibly seeing the local Scops Owl. We heard calls from the direction of a pylon before checking around the outside of the park that is locked at night. After no time at all and with quick work on the torch, we were face to face with this stunning little owl which was just staring down at us! We all had great views of the bird before it hopped out of view. On the drive back, singing broke out at the joy of seeing this owl a having a great end to the day.

Day 4

Sunday 3rd May

We started the day with a pre breakfast walk around the hotel where we watched a Short-toed Treecreeper nest and it was great to see the adults bringing food to the nest. After breakfast we went for a walk in the park in Madronera to try and locate a Scops owl in the daylight. We had no luck, so with lunch purchased we headed to Arrocampo reservoir. On arrival we went to the visitors centre to collect the hide keys before heading to hide 1. Here we saw Little Bittern in the reed bed, Purple Swamphen with chicks, Gull-billed Tern in flight, and we heard Savi's Warbler. The first Red Kite of the trip was also seen. We then moved to hide 2 where more Purple Herons, Gull-billed Terns and Purple Swamphen were seen together with a new bird for the trip; an elusive Ferruginous Duck. Next, at hide 5 we viewed a shallow pool which held good numbers of Black-winged Stilts and a Common Sandpiper, and there were a number of Bee-eaters perching on the ground and wires. On the lake opposite was a huge roost of Cattle Egrets. After enjoying the birds we headed for lunch on the benches back at the visitors centre. While enjoying the picnic we had four Little Terns fly overhead and feed a short distance away.

After lunch we drove to Monfragüe National Park. We took the scenic route through the dehesa and holm oak woodland, and as we approached Monfragüe we stopped for a walk through the dehesa and down to the

riverside. A large green lizard shot into a crack in a tree and a male Spanish Sparrow was calling and showed well. As we approached the river bank we could see Portilla del Tietar, a huge rock face with a vulture colony on it. We scanned the rock and found a Spanish Imperial Eagle proudly perched and everyone had telescope views of this very special bird. We returned to the vehicles and moved further down the road to a point a lot closer to the eagle and everyone enjoyed excellent views. We also watched Griffon Vulture with young, perched Black Vulture, and singing Rock Bunting. We then walked along the road to a viewing area where we had a better view of the rock and we spent some time enjoying the vultures. A male Subalpine Warbler was found feeding low and gave good views for all.

Next we drove to Pena Falcon at the other end of the park; another rock face with a vulture colony. We again had great views of the vultures together with a Black Redstart and a pair of Black Storks on their nest.

After a good day we returned to the hotel and enjoyed another excellent meal. With the checklist completed, we all headed for some well-earned rest.

Day 5

Monday 4th May

Today we returned to Monfragüe National Park and spent the whole day in this special place. We started at the Castillo where we could stand 'eye to eye' with the top of Pena Falcon, hoping for good views of the vultures and anything else we could find. We spent a couple of hours here with excellent views of Griffon Vulture, Booted Eagle, Black Kite, Blue Rock Thrush, Black Redstart, Rock Bunting and Red Deer. A pair of Hawfinch also briefly flew by. From this elevated position we had stunning views across the river and the surrounding habitats. As we walked back down the steep path an Egyptian Vulture flew low overhead.

Our next stop was at a nearby bridge in the hope of seeing Alpine Swift and it didn't take long to locate them. They were flying low over the water amongst a few hundred House Martins, giving a beautiful aerial display chasing each other at high speed. After having had our fill of these birds we headed for a coffee at the nearby visitors centre. Whilst having coffee a Swallow kept watch above us, and near the vehicles we saw Crested Lark and Sardinian Warbler.

Next we drove to a nearby viewpoint overlooking a river, rock face and pine woodland for our picnic lunch. There was a very tame one-eyed Red Fox looking for scraps, and lots of birds could be viewed from the benches. We saw Griffon Vultures mating on top of the cliff face, Black Kite sat on its nest, a purring Turtle Dove was enjoyed through the telescope, and a flyby Egyptian Vulture was a treat. Moving on, we stopped to view the river at a different spot and found an Egyptian Vulture on its nest and a Black Kite which flew in with prey and we watched it feeding.

We continued to Portilla del Tietar; not being able to resist another look at the Spanish Imperial Eagle. The male was standing proud on a perch when the female appeared with a large piece of prey and landed on the nest. The male then flew to the nest and they interacted together - fantastic! After feeding for a short time the female flew from the nest and looking as though she was flying away. She quickly turned and stooped, and to our delight landed on the side of the river giving breath-taking views; drinking with feet in the water before hopping up onto a log. After five to ten minutes she then flew back up to a perch next to the male. What a treat to watch this rarely seen behaviour.

After this we headed for home and on the way back we stopped at a pull in for a walk through some low scrub and open ground which produced singing Woodlark and a stunning male Black-eared Wheatear. It was now a little windy and with rain threatening, we returned to our hotel. It was a great end to the day and soon we were enjoying a tasty evening meal.

Day 6

Tuesday 5th May

Keen members had an early start and headed for the Santa Marta da Magasca steppe for first light. It was special to be out just as the sun was coming up and the area was buzzing with birds. It was a fantastic scene with lots of Great Bustards including a couple in their full 'foam bath' display, Little Bustard not too far from them, and Black-bellied Sandgrouse feeding in the same field. There were also twelve Pin-tailed Sandgrouse in flight but a bit distant. We enjoyed this special place. On the way back a Montagu's Harrier flushed a large flock of Pin-tailed Sandgrouse that flew across the road, and a flock of Great Bustards also took flight and flew very close in front of our vehicle. After a great hour or so in the field we returned for breakfast.

After breakfast everyone packed their bags and left them in the hotel lobby until we returned at lunchtime. We then left the hotel and headed to Madronera where we took a track through the middle of some steppe to the town of Belen. Birds seen were a family of Stonechats, Thekla Lark, two Red Kites, Booted Eagle, Black Vulture, Bee-eaters, Hoopoe and Southern Grey Shrike. Half way through the drive whilst passing a flock of sheep, Greg warned everyone to keep all windows closed for good reason: a huge dog was barking aggressively with a smaller one in front preventing us for driving away.

After the drive we went to Trujillo Bullring where there is a colony of Lesser Kestrels and we had great views of a male bringing in prey and eating it on a window ledge. We also saw Booted Eagle and Spotless Starling here. After enjoying the birds we returned to Vina las Torres for a final picnic lunch in the beautiful grounds of the hotel. After eating our picnic accompanied by a drop of fizz, we packed the vehicles and said our farewells.

We drove to Trujillo to spend our last night at the Izan Hotel. After checking in we walked into Trujillo Square for a drink before having some time to ourselves to explore the town. This fascinating town is rich in history and we spent the rest of the afternoon exploring on foot. Birdlife included Pallid Swift, Lesser Kestrel and nesting White Storks. We all met back at the hotel for our final evening meal and everyone talked about the trip and all the great wildlife we had seen.

Day 7

Wednesday 6th May

Today was all about getting safely to the airport. Keith and Sue carried on their travels from Trujillo in their camper van while the rest of us made our way to the airport. A few members of the group were staying in Madrid so we said our goodbyes before the remainder of us boarded our flight back to the UK.

Once we had landed and collected our bags we said our farewells following a fantastic week's birding, bringing another Naturetrek adventure to an end.

Species Lists

Birds (✓ = recorded but not counted; H = heard only)

	Common name	Scientific name	April/May						
			31	1	2	3	4	5	6
1	Mallard	<i>Anas platyrhynchos</i>	✓	✓	✓	✓	✓	✓
